

GDX2VEDA update

Instructions:

- Replace the current GDX2VEDA exe with the one included in this package; the existing EXE would be in the GAMS folder, or Wrk folder.
- Over write the times2veda.vdd file with this one.

Changes:

- GDX2VEDA offers a new option – “Not-0”, which suppresses the 0 values for chosen parameters. All attributes at process-timeslice level have been declared under this option so as to reduce the size of the VD file. For the world-TIMES model, this saves almost 100Mb!
